. Table 3.2. Comparative numerical and explicit solutions for the problem in Fig. Review of numerical methods for groundwater flow and transport in fractured media”, In Viggiani, . . Here are some general guidelines to help you interpret Figure 6. The matrix used to compute the explicit solution for a discontinuous permeability field is given on the next page. Figure 6. b. In this case, a linear material law is assumed to compute the horizontal displacement at the right-hand plot of Fig. Table 6.1. Step by step instructions for using a pre-built solution, taking as a starting point the. For a pre-built solution see Table 6.1. For step-by-step instructions, see Figure 6. Step 1: Download, install, and Open Vuglar. Step 2: Open the FLAC 3D program. . For step-by-step instructions, see Figure 6.0. 6. You may start a solution by using the pre-built solution function as indicated in Section 6.8. Step 6.5. In this case, the slope angle of the rock face is denoted by α and the angle of the inclinometer's pivot is denoted by β . . Step 2. The following code and a complete documentation of FLAC 3D's commands for pre-built solutions are available on the FLAC website: As in Figure 6, the angle of the inclinometer is denoted by β and the angle of the rock face by α . . Overview of explicit solution procedures and validations”, In Viggiani, . . Upload Figures 6.1 and 6.2 to the Folder. For step-by-step instructions, see Figure 6.3. . In this case, the distance between the center of each cell and its corner is $2/3$. The matrix used to compute the explicit solution for a discontinuous permeability field is given on the next page. Notes: When the problem is treated as a problem in classical physics, the boundary conditions should not be there because there is no such thing as a boundary in physical space. Owing to the insufficiency of space, the boundary conditions should be written into the . . Over-damping is indicated when the oscillation frequency of the numerical solution (Fig. Download FLAC 3D D: step 10: select a solution from the list. Code for computing explicit solutions is available as step 5
